

Sunrays Web Creations

To whom it may concern:

Our company prides itself on offering 100% data security with RAID configurations on all of our servers. These procedures have kept SWC customers data safe for many years since we opened for business, so we were shocked when several hard drives on one of our RAIDs simultaneously were destroyed and then we learned that our remote backup had skipped over several important procedures. Faced with losing weeks' worth of valuable data, we needed a data recovery center that was local, fast, professional, and most importantly, effective.

Data Analyzers, was convenient from our office When I got to the recovery center, I was immediately put at ease by their clean, modern facility and the professionalism of their staff. They were able to pull the data off of our hard drive quickly and efficiently, keeping our system downtime to a minimum. They offered fair pricing, good customer service, and a genuine sense of concern for us and our clients.

I hope that we are never faced with another incident where we have to rely on Data Analyzers for data recovery, but if disaster strikes again, I'm glad to know that there is a company that we can rely on right here in Central Florida.

Sincerely,

Derek V. Amato

CEO of SwcHost
