Data Analyzers,

I recently had the great misfortune of suffering the crash of a hard drive; a drive – and I'm ashamed to admit this – that contained years of work and wasn't backed up. It was important that I regain access to my data, and recovering it was something that was going to have to be done out of house. I contacted numerous local data recovery businesses, but they all either quoted prices that were cost prohibitive or they didn't come across as confident they'd be able to recover my data. That was until I found Data Analyzers. I spoke with Joannie Zayas and explained my issue to her. As she detailed my options, Joannie immediately gave me a sense of comfort. So I decided then to go with Data Analyzers. I'm glad I did. You guys were great about updating me throughout the entire process. When I ran into snags on my end, you were very patient and helpful. The drive analysis and data recovery process were done surprisingly fast! If I ever need to have this done again, I won't hesitate to use Data Analyzers. I was quite happy with my experience. And if I hear of friends or colleagues who find themselves in my situation, I'll be sure to recommend you folks. I can't thank you enough.

Sincerely,

Jon White
